

Ejiekpe Dickson Chidubem

Full-Stack Software Developer

Lagos State, Nigeria | +234 805 332 6926 | Chidubemdickson123@gmail.com | portfolio-dickson5.vercel.app

PROFILE

Full-stack software developer seeking an internship to contribute to and grow within a product engineering team. Builds complete web applications end to end — responsive React/Next.js frontends backed by Node.js, Express, and MongoDB APIs — informed by 2–3 years of UI/UX design experience that shapes clean, user-centred interfaces before a single line of code is written. Comfortable across the full workflow: wireframing and prototyping in Figma, implementing production-ready interfaces, building REST APIs and authentication, and managing deployment through Git, Vercel, and Netlify.

TECHNICAL SKILLS

Frontend

HTML, CSS, JavaScript, React, Next.js, Vite, responsive & mobile-first design

Design

Figma (low- to high-fidelity wireframing & prototyping), UI/UX principles, user flows, usability principles, visual hierarchy, typography, colour systems, design systems

Backend

Node.js, Express.js, MongoDB & Mongoose, RESTful API design, JWT authentication, CORS configuration

Tools & Practices

Git & GitHub (branching, merge conflict resolution, collaborative workflows), deployment (Vercel, Netlify), environment configuration, component-based development, cross-functional collaboration

PROJECT EXPERIENCE

Task Management App — Full-Stack Web Application

Personal Project — React (Vite), Node.js, Express, MongoDB | September 2026

- Built a full-stack task management application with a Vite/React frontend and an Express/MongoDB backend
- Implemented JWT-based authentication with protected routes and role-based access (admin vs. standard user)
- Designed the REST API layer — auth routes, user model, and controllers — connected to a MongoDB Atlas database
- Configured and deployed the application to Vercel and Netlify, resolving cross-platform build and environment configuration issues
- Managed the full Git/GitHub workflow, including branching and resolving merge conflicts, while maintaining a clean commit history

Enterprise Ops Dashboard — Design & Development

Independent Project — Figma, React / Next.js | August 2026

An end-to-end design-to-development project: a monitoring dashboard that lets managers track employee progress across an organization, taken from initial UX research through to a working frontend.

- Designed the onboarding experience in Figma, building low- and mid-fidelity wireframes to map user flow and reduce friction points before writing any code
- Designed and implemented UI components in React and Next.js, from wireframe through to a functioning interface
- Structured the onboarding flow and core dashboard views for clarity and ease of use, applying responsive, mobile-first layout principles throughout

Threadly — Fashion Resale Shopping UI

UI/UX Design Project — Figma | September 2026

- Designed a mobile shopping app UI for a fashion resale marketplace, covering browse, category filtering, and product detail flows
- Built interactive click-through prototypes in Figma to validate navigation and user flow
- Designed empty-state and edge-case screens — including out-of-stock states with a restock-notification flow — to cover the full range of real user scenarios, not just the primary path

EDUCATION

Mountain Top Secondary School

High School Diploma (S.S.C.E) — 2026

CERTIFICATIONS

- **UX & UI Design** — Certificate of Completion, GoMyCode (March 2025)

LANGUAGES

- English — Proficient
